TECHPARTNER / SAMPLE DELIVERABLE

CSV migration review

Invented records. Reproducible findings. A clear list of what to fix.

INITIAL RESULT: REVIEW REQUIRED 4 source rows / 5 destination rows

What was checked

Source: **source.csv**. Destination: **needs-review.csv**. Match records by **Record ID**; compare exact values using **Name to Contact**, **Notes to Activity** and **Status to Stage**. IDs are case-insensitive and whitespace-normalized.

Finding	Evidence	Action for migration owner
Duplicate ID	1001 occurs twice in the destination.	Confirm the intended row and remove the extra copy.
Missing record	1003 is absent from the destination.	Restore its record and mapped fields from the agreed source.
Unexpected record	1999 is absent from the source.	Confirm where it came from and whether it belongs.
Swapped fields	1002 has a note in Contact and a name in Activity.	Correct both values using the agreed field map.

Record 1002 detail: Contact: expected **Demo East**, found **Send sample quote**; Activity: expected **Send sample quote**, found **Demo East**.

Duplicate IDs make their value comparisons ambiguous. Resolve the duplicate before accepting a recheck; equal row counts alone would not prove correctness.

After corrections: the recheck

PASS for the agreed CSV checks. In corrected.csv, all 4 original IDs occur exactly once and all three mapped fields match. This supplied fixture illustrates a recheck; it is not work performed for a customer.

Limits and next step

A person must still confirm the intended mapping, business meaning and exclusions. Attachments, linked records, automations and transformations are outside this comparison. A passing CSV recheck does not certify a complete CRM migration. For a real review, agree the scope and secure transfer/retention arrangements before sending records.
